OpenReport

T he *OpenReport* action opens a report in normal view or in report design view.

Applies to ...

Object	Description
DoCmd	Root class. When present, its name must be "`DoCmd`" but the object name is optional.

Syntax

`[DoCmd.]OpenReport(`*ReportName, View*`)`

Argument	Optional	Type or Symbol	Description
ReportName	No	String	The name of the report to open. This argument is NOT case-sensitive.
View	Yes	acViewDesign acViewNormal acViewPreview	The view in which the query will open. *acViewNormal* and *acViewPreview* are equivalent. Default is *acViewNormal*.

The symbolic constants can be included in your code by copying and pasting next lines:

```
Const acViewDesign = 1
Const acViewNormal = 0
Const acViewPreview = 2
```

Remarks

- If the report was built with the Sun Report Builder extension, this extension is required to get the report open.
- If the *view* argument is *acDesign*, the query will get opened in Design mode. However any further action is not supported by the Access2Base API.
- The *OpenReport* action must not be triggered from a **standalone form**.

Error messages

Report '...' could not be opened
Report '...' not found
Action not applicable in this context
