## CloseAllRecordsets

The *CloseAllRecordsets* method closes all the currently open **recordsets** in the current database.

After processing a recordset should be closed as soon as possible. To close all open recordsets at once, use the *CloseAllRecordsets* method.

tags:  
**Methods**

### Applies to ...

Object	Description
<b>Database</b>	The representation of a connected database.

### Syntax

`database.CloseAllRecordsets()`

### Remarks

The current database can be retrieved by using the **CurrentDb** method applied either to the **Application** object, or to a **form** object

### Error messages

Processing is never interrupted when the *CloseAllRecordsets* method is invoked.

### See also

**OpenRecordset**  
**Close (method)**

### Example

```
Application.CurrentDb().CloseAllRecordsets()
```
