 RowSource ✕ RowSourceType ✕

RowSourceType

You can use the **RowSourceType** property (along with the **RowSource** property) to tell OpenOffice/LibreOffice Base how to provide data to a list box or to a combo box.

tags:
Properties

Applies to ...

Object	Type when in a form	Type when in a GridControl	Description
Control	ComboBox ListBox	ComboBox ListBox	A combo- or listbox on an open form or in a GridControl

Syntax

```
control.RowSourceType
control.RowSourceType = value
```

Returned values / Arguments

Integer

Remarks

- The *value* argument must contain, depending on the value of the **RowSource** property, one of next symbolic values:

com.sun.star.form.ListSourceType.VALUELIST
com.sun.star.form.ListSourceType.TABLE
com.sun.star.form.ListSourceType.QUERY
com.sun.star.form.ListSourceType.SQL
com.sun.star.form.ListSourceType.SQLPASSTHROUGH

See the [OpenOffice documentation](#) for more details.

- A *ComboBox* control does not support the value `com.sun.star.form.ListSourceType.VALUELIST` for the *RowSourceType* property.
- When the *RowSourceType* property is changed the content of the combo- or listbox is **NOT** refreshed.
- The *RowSourceType* property is not applicable to *list-* or *comboboxes* located in a **Dialog**.

Error messages

Property 'RowSourceType' not applicable in this context
Value '...' is invalid for property 'RowSourceType'

Example

Modify the content of a combo and a listbox

Select first item in the combobox

Select all items in the listbox

```
Dim ocCombo As Object, ocList As Object

Set ocCombo = getObject("Forms!myForm!myComboBox")
ocCombo.RowSourceType = com.sun.star.form.ListSourceType.SQL
ocCombo.RowSource = "SELECT [SHORTNAME] FROM COMPANIES WHERE [SHORTNAME]<>'' ORDER BY
ocCombo.ListIndex = 0

Set ocList = getObject("Forms!myForm!myListBox")
ocList.RowSourceType = com.sun.star.form.ListSourceType.VALUELIST
ocList.RowSource = "First;Second;Third"
ocList.Selected = Array(True, True, True)
```
