

SetHiddenAttribute

The *SetHiddenAttribute* action hides or shows the specified window.

tags:
Actions

Applies to ...

Object	Description
DoCmd	Root class. When present, its name must be "DoCmd" but the object name is optional.

Syntax

[DoCmd.]SetHiddenAttribute(*ObjectType*, *ObjectName*, *Hidden*)

Argument	Optional	Type or Symbol	Description	Returned Value
<i>ObjectType</i>	No	acTable acQuery acForm acReport acDiagram (i.e. Relationships) acBasicIDE acDatabaseWindow acDocument	The type of object to hide or show.	
<i>ObjectName</i>	Yes	String	The name of the object to hide or to show. This argument is NOT case-sensitive. The argument is mandatory when the <i>ObjectType</i> argument is one of next values: <i>acTable</i> , <i>acQuery</i> , <i>acForm</i> , <i>acReport</i> or <i>acDocument</i> . When the <i>ObjectType</i> is equal to <i>acDocument</i> , the <i>ObjectName</i> argument must contain the <u>filename</u> of the targeted window.	True if sucess
<i>Hidden</i>	Yes	Boolean	<i>True</i> (default value) hides the object window. <i>False</i> .makes the object visible again and sets the focus on the window.	

The symbolic constants can be included in your code by copying and pasting next lines:

```

Const acDiagram = 8
Const acForm = 2
Const acQuery = 1
Const acReport = 3
Const acTable = 0

Const acBasicIDE = 101
Const acDatabaseWindow = 102
Const acDocument = 111

```

Remarks

- In MSAccess the `SetHiddenAttribute` action is related to the **Application** root object, not to the **DoCmd** one.
- When the `ObjectType` is `acTable`, `acQuery`, `acForm` or `acReport`, the named object MUST be open.
- Before hiding the database window, be sure that a (programmatic) mean exists to make it visible again and be able to close the Base application.

Error messages

Arguments are missing or are not initialized
Argument nr. ... [Value = '...'] is invalid
Object '...' not found

Example

Hide the database window, select an open and visible form then maximize it.

```
Const acForm = 2
Const acDatabaseWindow = 102
    DoCmd.SetHiddenAttribute(acDatabaseWindow)
    If Not GetHiddenAttribute(acForm, "myForm") Then
        DoCmd.SelectObject(acForm, "myForm")
        DoCmd.Maximize()
    End If
```
