Count example

The following example uses the Count property to control a loop that prints information about all open forms and their controls.

tags:
Snippets of Code

```

Dim ofForm As Object, i As Integer
Dim j As Integer
Dim iControls As Integer, iForms As Integer
    iForms = Forms.Count           ' Number of open forms.
    If iForms > 0 Then
        For i = 0 To iForms - 1
            Set ofForm = Forms(i)
            _Print ofForm.Name
            iControls = ofForm.Controls().Count
            If iControls > 0 Then
                For j = 0 To iControls - 1
                    Print ofForm.Controls(j).Name
                Next j
            End If
        Next i
    End If
    Print
  
```
