OpenRecordset example

Create a new recordset on table *Invoices* and count the records (not the most efficient way to do it ... !)

tags:
Snippets of Code

```

Const dbReadOnly = 4
Dim orsRecords As Object, lCount As Long
    Set orsRecords = Application.CurrentDb().OpenRecordset("INVOICES", , , dbReadOnly)
    lCount = 0
    With orsRecords
        If Not .BOF Then                               ' An empty recordset has both .BOF and
            Do While Not .EOF
                lCount = lCount + 1
            End Do
        End If
    End With
End Sub
  
```

```
        .MoveNext  
    Loop  
End If  
.mClose()  
End With  
Print "Number of records = " & lCount
```
