Properties (collection)

## Properties (collection)

The *Properties* collection describes instances of all properties of an **object**

tags:  
**Collections**

### Syntax

`object.Properties()`  
`object.Properties(index)` or `object.Properties(propertyname)`

Argument	Type	Returned value
	absent	A <b>Collection</b> of the properties of the object
index	integer long	A <b>property</b> object
propertyname	string	

### Remarks

- Property **collections** are numbered from 0 to `object.Properties(...).Count - 1`
- The `propertyname` argument is not case sensitive.

### Error messages

Argument nr. 1 [Value = '...'] is invalid
Out of array range or incorrect array size for collection Properties()

**setProperty**

### Examples

To list the value of each property of a form ...

```
Dim ofForm As Object, i As Integer, iCount As Integer, oProperty As Object
    Set ofForm = Forms("myForm")
    iCount = getCount(Properties(ofForm))
    For i = 0 To iCount - 1
        oProperty = Properties(ofForm, i)
        Print getName(oProperty) & "=" & getValue(oProperty),
    Next i
    Print
```
