Functions returning an *Event* object

Parent object	Function	Type	Arguments	Description
Application	Events	Collection	the <i>event</i> object passed by OpenOffice/LibreOffice as argument of a document, form, subform or control event	Application.Events(<i>oEvent</i>) returns an <i>Event</i> object.

Properties of an *Event* object

Property	Type	Description
EventType	String	See the events handler .
EventName	String	The following <i>EventNames</i> are usually available: <i>OnAlphaCharInput</i> , <i>OnClick</i> , <i>OnCloseApp</i> , <i>OnCopyTo</i> , <i>OnCopyToDone</i> , <i>OnCreate</i> , <i>OnError</i> , <i>OnFocus</i> , <i>OnInsertDone</i> , <i>OnInsertStart</i> , <i>OnLoad</i> , <i>OnLoadCancel</i> , <i>OnLoadDone</i> , <i>OnLoadError</i> , <i>OnLoadFinished</i> , <i>OnMailMerge</i> , <i>OnMailMergeFinished</i> , <i>OnModifyChanged</i> , <i>OnMouseOut</i> , <i>OnMouseOver</i> , <i>OnMove</i> , <i>OnNew</i> , <i>OnNewMail</i> , <i>OnNonAlphaCharInput</i> , <i>OnPageCountChange</i> , <i>OnPrepareUnload</i> , <i>OnPrepareViewClosing</i> , <i>OnPrint</i> , <i>OnResize</i> , <i>OnSave</i> , <i>OnSaveAs</i> , <i>OnSaveAsDone</i> , <i>OnSaveDone</i> , <i>OnSaveFinished</i> , <i>OnSelect</i> , <i>OnStartApp</i> , <i>OnSubComponentClosed</i> , <i>OnSubComponentOpened</i> , <i>OnTitleChanged</i> , <i>OnToggleFullscreen</i> , <i>OnUnfocus</i> , <i>OnUnload</i> , <i>OnViewClosed</i> , <i>OnViewCreated</i> .
ContextShortcut	String	The shortcut notation of the object (form, dialog or control) having triggered the event.
ButtonLeft ButtonRight ButtonMiddle	Boolean	Indicates if the mouse button has been pressed .
XPos YPos	Null or Long	Coordinates of the mouse cursor.
ClickCount	Long	Number of mouse clicks.
KeyCode	Integer	See the constants group com.sun.star.awt.Key
KeyChar	String	The pressed key.
KeyFunction	Integer	See the constants group com.sun.star.awt.KeyFunction
KeyAlt KeyCtrl KeyShift	Boolean	Key combined with Alt, Ctrl or Shift keys.
FocusChangeTemporary	Boolean	False if focus change due to a user action in same window.
ObjectType	String	Returns "EVENT"
RowChangeAction	Long	See the constants group com.sun.star.sdb.RowChangeAction

Recommendation	String	"IGNORE" if the event is recommended to be ignored. Valid only for the <i>Before record action</i> form event which is, for strange reasons, fired twice. The first time is recommended to be ignored.
Source	Object	Return the Form , SubForm , Dialog or Control object having fired the event
SubComponentName	String	The name of the component being <i>opened</i> or <i>closed</i> while executing a <i>Loaded a sub component</i> or <i>Closed a sub component</i> event. Such an event is set thru the Tools + Customize ... + Events menu command.
SubComponentType	Long	To be associated with the <i>SubComponentName</i> property. Returns one of next constants: <i>acTable</i> <i>acQuery</i> <i>acForm</i> <i>acReport</i>

Methods

Method	Argument(s)	Return	Description
getProperty	property	Variant	Return the value of the given property.
hasProperty	property	Boolean	Return True if the Event has the given property.

Remarks

- All properties are read-only.
- Their values are accessible with the usual syntax
oEvent.property
- The symbolic constants can be included in your code by copying and pasting next lines:

```
Const acForm = 2
Const acQuery = 1
Const acReport = 3
Const acTable = 0
```

Example

Assign next macro to the *TextModified* event of a combo box (other controls could require that the *Changed* event should be used for the same purpose).

When the user changes his/her selection in the combo box the content of the form is requeried and refreshed on the screen.

```
Sub SelectChanged(poEvent As Object)

REM Combo value has changed
REM => requery form

Dim oeEvent As Object, ocCombo As Object, sSQL As String, oForm As Object
    Set oeEvent = Events(poEvent)
    Set ocCombo = oeEvent.Source
    sSQL = "SELECT [PRODUCT CODE],[DENOMINATION],[SUPPLIER ID] FROM PRODUCTS WHERE " _
        & "[SUPPLIER ID]='" & ocCombo.Value & "'"
    Set oForm = Forms("myComboForm")
    oForm.RecordSource = sSQL

End Sub
```
