## LinkMasterFields

You can use the **LinkMasterFields** property (along with the **LinkChildFields** property together) to know how the records in a form are linked to records in a subform.

tags:  
Properties

### Applies to ...

Object	Type when in a form	Type when in a GridControl	Description
Control	SubForm	None	A subform of an open form or another subform

### Syntax

```
control.LinkMasterFields
control.LinkMasterFields(index)
```

### Returned values

Array of **Strings** or **String**

### Remarks

The **LinkMasterFields** property is read-only.

The array can be empty. In this case the **UBound()** function applied on that array will return **-1**.

### Error messages

Argument nr. ... [Value = '...'] is invalid
Property 'LinkMasterFields' not applicable in this context
Out of array range or incorrect array size for property 'LinkMasterFields'

### See also

**LinkChildFields**

## Example

List all the master / children fields of a subform

```
Dim ocSubform As Object, i As Integer, iCount As Integer
    Set ocSubform = getValue("Forms!myForm!mySubform.Form")
    iCount = UBound(ocSubform.LinkMasterFields)
    For i = 0 To iCount
        Print "Master " & ocSubform.LinkMasterFields(i) & " is linked to " & ocSubform
    Next i
    Print
```
