CancelUpdate

Cancels any pending updates for a **Recordset object**.

tags:
Methods

Applies to ...

Object	Description
Recordset	A set of records derived from a table, a query or an SQL statement.

Syntax

`recordset.CancelUpdate()`

Returned value

True if success.

Remarks

- You can use the *CancelUpdate* method to cancel any pending updates resulting from an **Edit** or **AddNew** operation. For example, if a user invokes the *Edit* or *AddNew* method and hasn't yet invoked the **Update** method, *CancelUpdate* cancels any changes made after *Edit* or *AddNew* was invoked.
- Check the **EditMode property** of the *Recordset* to determine if there is a pending operation that can be canceled.
- Using the *CancelUpdate* method has the same effect as moving to another record without using the *Update* method, except that the current record doesn't change, and various properties, such as **BOF** and **EOF**, aren't updated.

Example

Modify the last record in a table after user confirmation

```
Dim oRecordset As Object
Const cstYesNo = 4
Const cstYes = 6
    Set oRecordset = Application.CurrentDb().OpenRecordset("Expenses")      ' "Exper
    With oRecordset
        .MoveLast
        .Edit
        .Fields("AMOUNT").Value = 9876
```

```
If MsgBox("Do you confirm?", cstYesNo, "Update record") = cstYes Then .Update  
.mClose  
End With
```
