TabIndex example

List all controls in TabIndex ascending sequence. Only initialized TabIndexes are included.

tags:
Snippets of Code

```
Dim oForm As Object, ocControl As Object, i As Integer, iCount As Integer
Dim sNames() As String
```

```
Set ofForm = Forms("myForm")
iCount = ofForm.Controls().Count
ReDim sNames(0 To iCount - 1)
For i = 0 To iCount - 1
    Set ocControl = ofForm.Controls(i)
    If ocControl.hasProperty("TABINDEX") Then
        If ocControl.TabIndex > 0 And ocControl.TabIndex < iCount Then sNames
    End If
Next i
For i = 0 To iCount - 1
    If sNames(i) <> "" Then Print sNames(i),
Next i
Print
```

Reset Tab sequence to automatic

```
For i = 0 To iCount - 1
    If sNames(i) <> "" Then
        Set ocControl = ofForm.Controls(sNames(i))
        ocControl.TabIndex = -1
    End If
Next i
```
