Move

The **Move** method moves the specified object to the coordinates specified by the argument values.

tags:
Methods

Applies to ...

Object	Description
Form	The representation of an <i>OpenOffice/LibreOffice</i> database form
Dialog	The representation of a Basic dialog

Syntax

```
form.Move([Left], [Top], [Width], [Height])
dialog.Move([Left], [Top], [Width], [Height])
```

Argument	Type	Description	Returned value
form	Form object	Form to be moved	True if success.
dialog	Dialog object	Dialog to be moved	
Left	Integer Long	The screen position for the left edge of the form relative to the left edge of the screen	
Top	Integer Long	The screen position for the top edge of the form relative to the top edge of the screen	
Width	Integer Long	The desired width of the form	
Height	Integer Long	The desired height of the form	

Remarks

Error messages

Argument nr. ... [Value = '...'] is invalid

Width

Example

Move a form to new left-top coordinates and resize it ...

```
Dim ofForm As Object  
Set ofForm = Forms("myForm")  
ofForm.Move(100, 200, 500, 200)
```
