- [Additional Platform Support](#)
- [Known Issues](#)
 - [For macOS users](#)
 - [For Windows Users](#)
 - [For Developers](#)
- [Installation Information](#)
- [Stay informed about Apache OpenOffice](#)

General Remarks

[Apache OpenOffice](#) 4.1.7 is a Maintenance release incorporating important bug fixes and one new feature. All users of Apache OpenOffice 4.1.6 or earlier are advised to upgrade. You can download Apache OpenOffice 4.1.7 [here](#).

Please review these Release Notes to learn what is new in this version as well as important remarks concerning known issues and their workarounds.

Only use the original website "<https://www.openoffice.org/download/>" to download. The installed software can be verified with the About box (see menu "Help - About OpenOffice) by comparing the numbers with the reference data on the download webpage (see the text in the light green box). For Apache OpenOffice 4.1.7 it has to be "AOO417m1 | Build ID 9800 | Git hash 46059c9192".

Improvements/Enhancements

- Adds support for [AdoptOpenJDK](#) as well as Oracle Java

Bug Fixes

- Possible crash in Freetype code
- Crash in Writer when linking frames on OS/2
- Apache OpenOffice TM in Splash screen has different background

For a complete overview of all resolved issues please see the [list in Bugzilla](#).

Language Support

Updated translations

There are no new or updated languages.

Updated Dictionaries

Asturian (ast)	English (en-GB)
-----------------------	------------------------

For a complete list of available languages and language packs see the [download webpage](#) (click the language drop-down-box).

Additional Platform Support

Binaries are still provided for the same platforms as for the previous OpenOffice 4.x releases:

- Windows
- macOS
- Linux 32-bit (RPM and DEB)
- Linux 64-bit (RPM and DEB)

Known Issues

For macOS users

- Apache OpenOffice 4.1.7 will be flagged by the Gatekeeper facility in macOS. This is a feature to help guard against malware on macOS systems.
 - For OS X up to 10.11 "El Capitan": There is a procedure laid out at the following link to allow applications not installed from the Mac App store to run. See the [Mac support article](#).
 - For macOS 10.12 "Sierra": In Finder, Control-click or right click the icon of the app. Select Open from the top of contextual menu that appears. Click Open in the dialog box. If prompted, enter an administrator name and password. This is needed just the first time you launch Apache OpenOffice.
 - Due to a known bug in [Oracle Java](#) installations of Apache OpenOffice on macOS that do not have the legacy Apple Java 6 installed will not be able to recognize Oracle Java 7 and 8. If not able to upgrade to Java 9 than install the legacy version of Apple Java from the following link: [Legacy Apple Java 6](#). This will allow the portions of AOO that require Java to run properly.

For Windows Users

- Apache OpenOffice 4.1.7 supports Java 8, which is the recommended configuration; but (especially on 64-bit Windows) you might receive warnings about the Java version being defective. In that case, download and install the [Microsoft Visual C++ 2010 Redistributable Package](#).

For Developers

- The OpenOffice SDK won't build with Java 8. Either build with `--disable-odk` or see the dev list archives for possible solutions.

Installation Information

Installation instructions can be found at: <https://www.openoffice.org/download/common/instructions.html>
